

Bug List

1. Text Color Picker Indicator Issue

Current Behavior:

When a user changes the text color, both the "A" icon and the color indicator line beneath it change to the selected color.

Expected Behavior:

Only the color indicator line below the "A" icon should reflect the selected color. The "A" icon itself should remain visible and retain its default color.

Impact:

If a user selects white text color, the "A" icon also becomes white on a white background, making the tool invisible.

2. PPT Import Alters Existing Text Colors

Current Behavior:

When a PPT created externally (e.g., PowerPoint, Canva, etc.) is uploaded through the Admin Panel, text colors are randomly modified.

Expected Behavior:

All text colors, formatting, and styling should remain exactly as defined in the original PPT.

Impact:

Imported presentations lose their intended design consistency and branding.

3. Text Selection is Not Draggable

Current Behavior:

While editing text on desktop, users cannot drag the cursor to select a specific portion of text. The editor either selects a single word or the entire paragraph.

Expected Behavior:

Users should be able to click and drag the cursor to select any desired range of text, similar to standard text editors and presentation tools.

Impact:

Precise text editing and formatting become difficult.

4. Text Color Change Affects Background

Current Behavior:

When a user selects specific text and changes its color, the background color or entire text block is also affected and the colour of entire background gets changed.

Expected Behavior:

Only the selected text should change color. Background colors and non-selected content should remain unchanged.

Impact:

Unintended formatting changes occur, affecting slide design and readability.

5. Overview Mode Allows Unwanted Editing

Current Behavior:

In Overview Mode, slide contents (text, images, elements) remain editable and selectable. While attempting to drag or rearrange slides, slide elements may get selected instead.

Expected Behavior:

Overview Mode should function as a slide management view only:

- Slides should be draggable for reordering.
- Slides should be selectable for navigation.
- Zoom in/out actions should work.
- Editing of slide contents should be completely disabled.

Impact:

Users may accidentally modify or delete slide content while managing slides.

6. Auto-Save Not Working

Current Behavior:

Changes made to slides are not automatically saved unless the user manually saves the presentation.

Expected Behavior:

The system should automatically save changes at regular intervals and/or after significant user actions.

Impact:

Users risk losing work if they close the application, refresh the page, or encounter a system interruption.

6. Improper animation

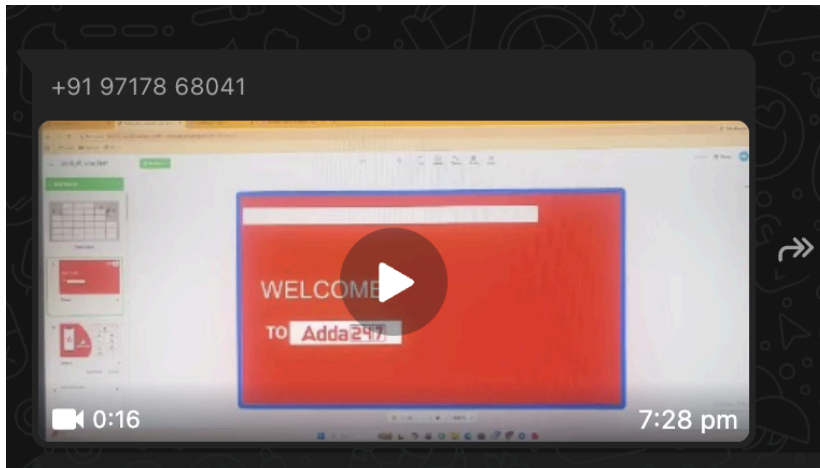

Current Behavior:

Slides are navigating very fast, despite PACE not being able to set.

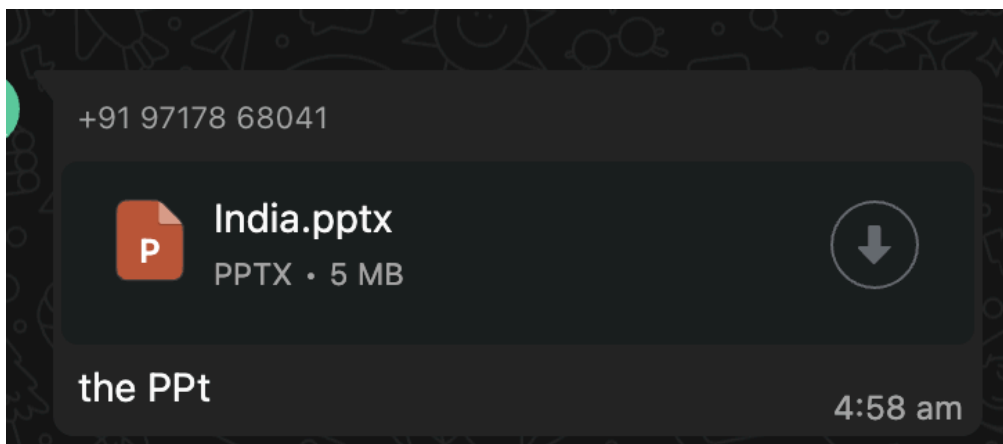

Expected Behavior:

The pace should reflect and this should run seamlessly

Impact: Improper UX

7. This PPT is not rendering

7. Sub-topics to be included in the store feature & the custom topic name to be added in admin too.

8. Pan tab compatibility to check .

9. Copy paste through the keyboard is not functioning properly (especially when we are trying to do it with the shapes).

10. Whenever a large text has been copied from an external source and pasted in an already decorated slide, the elements that already existed in the slide disappears.

11. Logo has been changed.
